

Literature Index

This index summarises parsed literature for the Intelli-Trading Fours dissertation. It is organised by dissertation concept rather than by paper, so sources can be found quickly while writing.

Source Status Summary

Source	Status	Parsing Quality	Core Use	Source Card
Baird, Blevins, and Zahler 1993	parsed	good	interactive computer performer, timing, ensemble following	card
Donnay et al. 2014	parsed	good	trading fours, musical dialogue, interactive improvisation	card
Eigenfeldt 2016	parsed	good	musebots, autonomous MuMe agents	card
Gillick et al. 2019	parsed	good	drum generation, groove, humanisation, future work	card
Herrington 2010	parsed	good	interactive music system design and sensing/processing/response	card
Hodson 2007	parsed	partial	jazz interaction, interplay, musical conversation	card
Hoffman and Weinberg 2011	parsed	good	robotic improvisation, call-and-response, synchronization	card
Hu et al.	parsed	good, year needs check	call-and-response generation, learning-based comparison	card
Levitin, Grahn, and London 2018	parsed	good	rhythm, movement, entrainment, timing	card
Longuet-Higgins and Lee 1984	parsed	good	rhythmic interpretation, meter, ambiguity	card
Martin and Torresen 2019	parsed	good	IMPS, predictive interaction, MDRNNs	card
Ostermann, Vatolkin, and Rudolph	parsed	good, year needs check	reactive jazz accompaniment evaluation	card
Pachet 2002	parsed	good	Continuator, interactive style-aware generation	card
Pasquier et al. 2016	parsed	good	musical metacreation overview	card

Source	Status	Parsing Quality	Core Use	Source Card
Petit and Serrano - Generative Music	parsed	good, year needs check	reactive programming for generative music	card
Petit and Serrano - Skini	parsed	good, year needs check	reactive state-based interactive music	card
Rowe 1991	needs manual review	poor, scanned PDF	machine listening and real-time agents	card
Scheirer 2000	parsed	good	music-listening systems, feature extraction	card
Smith 2022	parsed	good	human-AI partnerships and creative agency	card
Temperley 2009	parsed	good	symbolic music analysis and metrical inference	card
Thom 2000	parsed	good	real-time interactive improvisation and BoB	card
Toussaint 2004	parsed	good	cyclic binary rhythm representation and evenness	card
Toussaint 2010	parsed	good	algorithmic rhythm generation and complementarity	card
Vaggione 1993	parsed	good	determinism, emergence, and models of musical time	card

Human-AI Improvisation and Co-Creativity

Source	Key Ideas	Useful Dissertation Sections
Pachet 2002	Real-time interactive musical continuation, style-aware response, performer-conditioned generation.	2.2, 2.3, 6.1
Thom 2000	Personalised improvisational companionship and time-sensitive perception/generation.	2.2, 2.3, 6.1
Hoffman and Weinberg 2011	Embodied interactive improvisation, anticipation, synchronization, call-and-response evaluation.	2.2, 2.4, 7.6, 8.6
Smith 2022	Human-AI partnership, creative autonomy, performer experience.	2.2, 2.7, 7.6
Donnay et al. 2014	Interactive improvisation as collaborative musical communication.	1.1, 2.5

Musical Metacreation and Machine Musicianship

Source	Key Ideas	Useful Dissertation Sections
Pasquier et al. 2016	Field-defining MuMe overview; creative musical tasks; autonomous and interactive systems.	2.1, 2.2
Eigenfeldt 2016	Autonomous software agents collaborating musically with other agents.	2.1, 2.2
Smith 2022	AI in generative music as tool, actor, or partner.	2.2, 2.7
Vaggione 1993	Constraints, determinism, and multi-level musical time.	2.3, 3.6

Reactive and Generative Music Systems

Source	Key Ideas	Useful Dissertation Sections
Martin and Torresen 2019	Predictive neural interaction using continuous control data.	2.3, 3.6, 6.6
Pachet 2002	Bridging interactivity and stylistically consistent generation.	2.3, 6.1
Petit and Serrano - Skini	Interactive structured music through reactive state-based programming.	3.2, 3.4, 6.4
Petit and Serrano - Generative Music	Reactive programming for real-time generative music.	3.4, 6.6, 8.5
Vaggione 1993	Avoids simplistic deterministic vs random framing.	2.3, 3.6

Trading Fours and Turn-Based Interaction

Source	Key Ideas	Useful Dissertation Sections
Donnay et al. 2014	Direct source for trading fours as interactive musical communication.	1.1, 2.5
Hodson 2007	Jazz improvisation as interaction, interplay, and musical conversation.	1.1, 2.5
Hoffman and Weinberg 2011	Call-and-response task evaluation and response accuracy.	2.5, 7.6, 8.6
Hu et al.	Call-and-response generation as a computational music problem.	2.3, 6.6, 8.5

Rhythm, Timing, and Entrainment

Source	Key Ideas	Useful Dissertation Sections
Levitin, Grahn, and London 2018	Rhythm, pulse, tempo, movement, synchronization, entrainment, groove.	2.4, 4, 7.6
Baird, Blevins, and Zahler 1993	Tempo following and ensemble responsiveness.	2.2, 2.4, 3.6
Hoffman and Weinberg 2011	Real-time synchronization and anticipatory action.	2.4, 7.6
Scheirer 2000	Tempo perception and music-listening systems.	2.4, 5.1
Gillick et al. 2019	Expressive drum timing and humanization.	2.4, 4.4, 8.5

Rhythm Representation and Quantisation

Source	Key Ideas	Useful Dissertation Sections
Toussaint 2004	Rhythm as cyclic binary onset/silence structure.	2.4, 4.5
Longuet-Higgins and Lee 1984	Rhythmic ambiguity, metrical interpretation, grouping.	2.4, 2.6, 4.4
Gillick et al. 2019	Quantisation/humanization as paired drum transformations.	4.4, 8.5
Temperley 2009	Symbolic music analysis and metrical inference.	2.6, 5
Scheirer 2000	Feature extraction from music-listening systems.	5.1

Metrical Hierarchy, Salience, and Anchors

Source	Key Ideas	Useful Dissertation Sections
Longuet-Higgins and Lee 1984	Listeners resolve rhythmic ambiguity through regularity and grouping assumptions.	2.6, 5.4
Temperley 2009	Metrical structure as part of symbolic music analysis.	2.6, 5
Levitin, Grahn, and London 2018	Meter, pulse, synchronization, and rhythm cognition.	2.4, 2.6
Toussaint 2004	Evenness and onset distribution in cyclic rhythms.	2.6, 6.4

Real-Time Interactive System Constraints

Source	Key Ideas	Useful Dissertation Sections
Martin and Torresen 2019	Real-time predictive interaction on modest hardware.	3.6, 6.6
Baird, Blevins, and Zahler 1993	Real-time following and tolerance of performer timing changes.	3.6
Hoffman and Weinberg 2011	Synchronization, anticipation, and timing accuracy in performance.	2.4, 3.6
Petit and Serrano - Skini	Reactive state-based execution for interactive music.	3.2, 3.4
Herrington 2010	Sensing-processing-response architecture in an interactive music system.	3.1, 3.4
Rowe 1991	Potentially important for real-time agents, but needs OCR/manual check.	2.3, 3.4

Evaluation of Interactive Music Systems

Source	Key Ideas	Useful Dissertation Sections
Ostermann, Vatolkin, and Rudolph	User study for reactive jazz accompaniment and perceived creativity.	2.7, 7, 8.6
Hoffman and Weinberg 2011	Experimental manipulation of embodiment and response accuracy.	2.7, 7.6, 8.6
Smith 2022	Performer experience and partnership framing.	2.7, 7.6
Hu et al.	Objective metrics for call-response generation.	2.7, 8.5
Gillick et al. 2019	Quantitative and qualitative evaluation of drum humanization.	7.5, 8.5

Response Planning and Generation

Source	Key Ideas	Useful Dissertation Sections
Pachet 2002	Performer-conditioned continuation and style-aware interactive response.	6.1, 6.6
Toussaint 2010	Algorithmic rhythm-generation properties and complementarity.	6.4, 8.5
Hu et al.	Learning-based call-response generation.	6.6, 8.5

Source	Key Ideas	Useful Dissertation Sections
Gillick et al. 2019	Learned drum sequence transformations and humanization.	8.5
Martin and Torresen 2019	Predictive neural interaction as future comparison.	6.6, 8.5
Petit and Serrano - Generative Music	Reactive generative music methods.	6.6, 8.5

Dissertation Section Map

Dissertation Section	Best Sources	Notes
Chapter 1.1 Motivation: Trading Fours as Human-AI Dialogue	Donnay et al. 2014; Hodson 2007; Pachet 2002	Donnay is the strongest direct source for trading fours.
Chapter 2.1 Musical Metacreation and Machine Musicianship	Pasquier et al. 2016; Eigenfeldt 2016; Smith 2022	Use Pasquier as the anchor source.
Chapter 2.2 Human-AI Improvisation and Co-Creative Systems	Pachet 2002; Thom 2000; Hoffman and Weinberg 2011; Smith 2022	Covers interaction partners, improvisation, and performer experience.
Chapter 2.3 Reactive and Generative Musical Agents	Martin and Torresen 2019; Pachet 2002; Vaggione 1993; Petit and Serrano	Useful for positioning IT4s as closed-loop but not fully generative.
Chapter 2.4 Rhythm, Timing, Entrainment, and Turn-Taking	Levitin et al. 2018; Baird et al. 1993; Hoffman and Weinberg 2011; Scheirer 2000	Use Levitin et al. as the main rhythm cognition source.
Chapter 2.5 Trading Fours and Turn-Based Musical Dialogue	Donnay et al. 2014; Hodson 2007; Hoffman and Weinberg 2011	Link trading fours to the state-machine architecture.
Chapter 2.6 Metrical Hierarchy, Salience, and Rhythmic Structure	Longuet-Higgins and Lee 1984; Temperley 2009; Toussaint 2004; Levitin et al. 2018	Supports anchors, metrical dominance, and skeleton generation.
Chapter 2.7 Evaluation of Interactive Music Systems	Ostermann et al.; Hoffman and Weinberg 2011; Smith 2022; Hu et al.	Use to justify future user evaluation and current diagnostic limits.
Chapter 5 Rhythmic Analysis	Longuet-Higgins and Lee 1984; Temperley 2009; Scheirer 2000; Levitin et al. 2018	Supports symbolic interpretation and feature extraction.

Dissertation Section	Best Sources	Notes
Chapter 6 Response Planning and Prototype Generation	Pachet 2002; Martin and Torresen 2019; Toussaint 2010; Hu et al.; Gillick et al. 2019	Use to compare IT4s planning with future richer generation.
Chapter 7 Testing, Diagnostics, and Evaluation	Ostermann et al.; Hoffman and Weinberg 2011; Smith 2022; Gillick et al. 2019	Supports evaluation framing beyond unit tests.

Claim Support Quick Reference

Claim Type	Strongest Sources	Support Level
Trading fours is a dialogic improvisational structure.	Donnay et al. 2014; Hodson 2007	strong
Interactive music systems should be evaluated as processes, not only outputs.	Smith 2022; Ostermann et al.; Hoffman and Weinberg 2011	strong
Real-time musical systems require timing responsiveness.	Levitin et al. 2018; Baird et al. 1993; Hoffman and Weinberg 2011	strong
Rhythm can be represented computationally as structured onsets over a grid/cycle.	Toussaint 2004; Longuet-Higgins and Lee 1984	strong
Metrical structure matters for rhythm interpretation.	Longuet-Higgins and Lee 1984; Temperley 2009; Levitin et al. 2018	strong
IT4s should be distinguished from learning-based predictive systems.	Martin and Torresen 2019; Pachet 2002; Hu et al.	strong
Full response realisation remains future work.	Pachet 2002; Gillick et al. 2019; Hu et al.; Toussaint 2010	use as comparison, not direct support
Closed-loop state architecture is a valid CS contribution.	Petit and Serrano - Skini; Herrington 2010; Baird et al. 1993	moderate

Known Gaps

Gap	Why It Matters	Action
Rowe 1991 PDF is scanned/image-only.	It is likely a key source for machine listening and real-time agents.	Provide a text-based PDF, OCR output, or manual notes.
Some PDFs lack confirmed year/venue from parsed text.	Bibliography accuracy matters for final dissertation.	Add BibTeX entries to Literature/references.bib .

Gap	Why It Matters	Action
HCI turn-taking literature outside music is not yet indexed.	Could strengthen claims about reducing ambiguity through explicit turns.	Optional: add 1-2 HCI/conversation/turn-taking sources.
